Team ID	PNT2022TMID30918
Project Name	Smart farmer - Iot Enabled Smart Farming Application.
Team leader	Sapna Priya J
Team members	Sneha S , Pavithra P, Soundammal G

MOBILE APPLICATION TESTING:

Mobile applications are connected via node-red by providing a specific link to MIT App Inventor. So node-red sends the data that is received from the IBM cloud. The received data is then displayed in the mobile application dashboard.
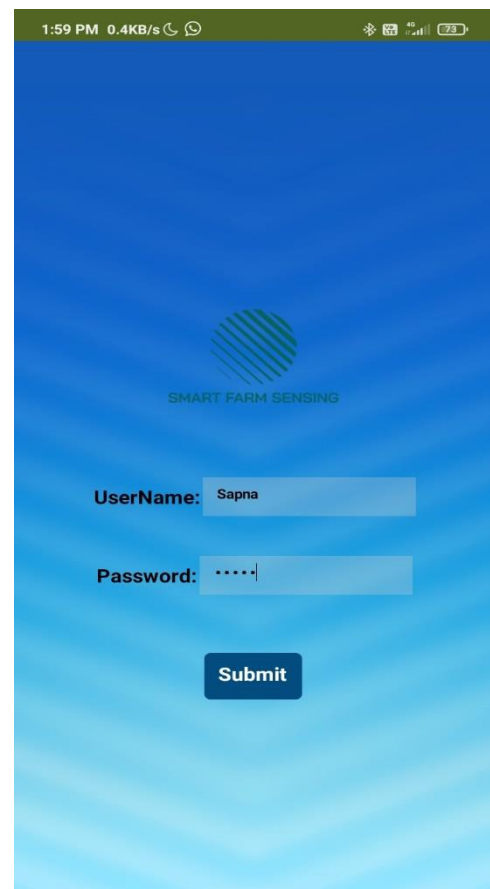

If you enter incorrect credentials on the Log in page, an error message will appear. It will not

proceed to the Dashboard page until you enter the correct information.
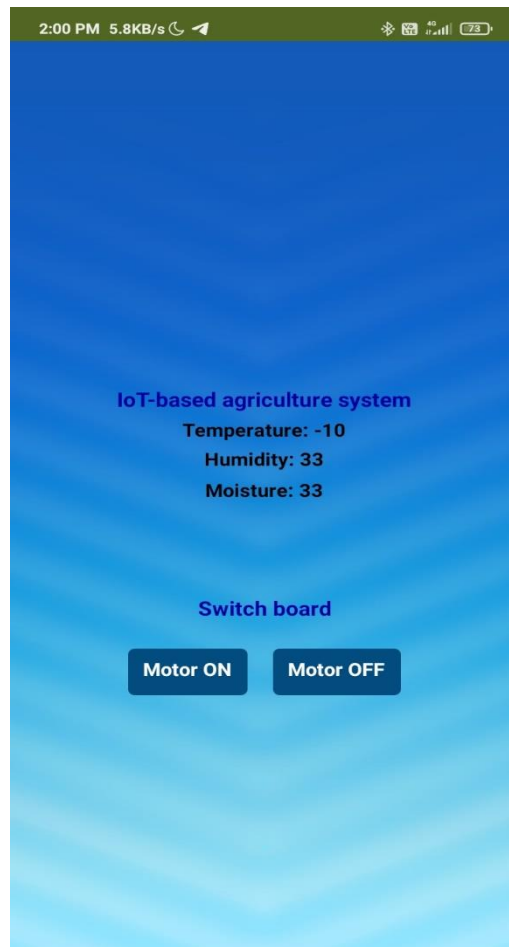

The command is sent to the Python code and node red when you toggle the motor on/off switch in the mobile app.
